

“Many countries either adopted or declined early treatment with hydroxychloroquine, effectively forming a **large trial with 1.8 billion people in the treatment group and 663 million in the control group**. As of September 13, 2020, an average of 63.4 per million in the treatment group have died, and 470.8 per million in the control group, relative risk 0.135.“ **“The treatment group has a 74.9% lower death rate.** Confounding factors affect this estimate. We examined diabetes, obesity, hypertension, life expectancy, population density, urbanization, testing level, and intervention level, which do not account for the effect observed.” - <https://hcqtrial.com/>

The U.S. has a higher death rate than every country on the chart with the exception of Mexico. How will today's Americans go down in history? As a people that were passively led like lambs to the slaughter, for having blindly trusted those like Anthony Fauci and the NIH, FDA and CDC as they presided over the **unnecessary** deaths of what could become well over 200,000 Americans along with untold economic despair, misery and destruction. While profits for Gilead, Bill Gates and Big Pharma were advanced at the cost of human lives, through the fake “science” of **discredited** drug “trials” that were used as an excuse to demonize the **safe, 99+% effective (when treated early in the OUTpatient setting) hydroxychloroquine+zinc+azithromycin - world renowned \$20 Zelenko Protocol - that has been saving American lives since back in March.**

Will Americans finally rise up in anger against **the censorship of truth** by Google, Youtube, Facebook, Twitter, the fake-news media and brain-dead pundits **that demonized hydroxychloroquine**, and are thus **directly responsible** for the **completely unnecessary deaths** of well over 100,000 innocent Americans. Please copy and distribute. This simple action could save someone's life.

The following is another Google-censored website, that is easily found on Duckduckgo or Bing.
